- Proof of the Main Theorem

## There Is No Largest Prime Number

 The proof uses reductio ad absurdum.
## Theorem

There is no largest prime number.

## Proof.

(1) Suppose $p$ were the largest prime number.
(3) Let $q$ be the product of the first $p$ numbers.
(3) Then $q+1$ is not divisible by any of them.
( Thus $q+1$ is also prime and greater than $p$.
