### Chapter 1

# **Support Vector Machines**

The  $\text{SVM}^1$  is used widely in the area of pattern recognition. SVMs are ... (but beware, converting the initial letter to upper case for a small caps acronym is sometimes considered poor style).

Short version: SVM. Long version: support vector machine. Full version: SVM (support vector machine). Description: Statistical pattern recognition technique [1].

This is the entry in uppercase: SVM.

### Chapter 2

# Kernel Support Vector Machines

The  $KSVM^1$  is an SVM that uses the so called "kernel trick". This is the entry's description without a link: Statistical pattern recognition technique using the "kernel trick".

Possessive:  $KSVM's^2$ . Make the glossary entry number bold for this one  $SVM^3$ .
